

Vantum Publisher: OAuth and upload flow

Internal publishing tool of Vantum (Sachin Shetty, individual developer) · Google Cloud project 548450897530 (vantum-509802) · September 27, 2026

What the API client is

Vantum Publisher is a private, scheduled job (GitHub Actions) with no user interface and no users outside Vantum. Once a day it renders a short vertical news video for each of our two accounts, **@vantum.tech** and **@vantum.bio**, and uploads it to that account's own YouTube channel. It is not distributed, sold or offered to anyone.

Flow

OAuth 2.0

Who signs in	Only the channel owner (me), once per channel, through Google's consent screen for our own OAuth client. No other person ever signs in.
Scope requested	<code>https://www.googleapis.com/auth/youtube.upload</code> ("Manage your YouTube videos"), the narrowest scope that allows uploading. No other scope.
Token storage	The refresh token for our own account is stored only as an encrypted GitHub Actions secret and used only to upload our scheduled videos.
Revocation	Access can be revoked at any time at <code>https://security.google.com/settings/security/permissions</code> ; the stored token is then deleted.
User data	None. The client reads no YouTube data: no channels, comments, analytics or viewer information.

The only API call (from post.py)

```
creds = Credentials(None, refresh_token=YT_REFRESH_TOKEN,
token_uri="https://oauth2.googleapis.com/token",
                client_id=YT_CLIENT_ID, client_secret=YT_CLIENT_SECRET)
yt = build("youtube", "v3", credentials=creds)
body = {"snippet": {"title": title[:100], "description": description, "categoryId": "28"},
        "status": {"privacyStatus": "public", "selfDeclaredMadeForKids": False}}
yt.videos().insert(part="snippet,status", body=body,
                media_body=MediaFileUpload(vertical_path, resumable=True)).execute()
```

Volume

Two uploads a day (one per channel), about 3,200 quota units a day, within the default 10,000. No additional quota is requested; the audit is requested so that our uploads can be public.

Content

Every video is our own original work: a summary of one story reported by two independent outlets, with every figure checked against those sources. Images are openly licensed (CC0, public domain, CC BY) or company press-kit images, and music is CC0 / CC BY; all are credited in the video description.
